

# Chanson PL-B 502-Violet Ionizer

## Product Description

PLB-502 Violet ionizer is the most economical model in Chanson's stable of World-Class Alkaline water ionizers, with all the benefits of alkaline water without any bells and whistles and with a most reasonable price to make it affordable to all. It offers close to all basic features and functions of our higher-end ionizers. If you want to avail of the benefits of alkaline water without investing much, it is the best choice to go for.

The 5 Electrode Plates of the Violet 5-plate comes with the superconductivity and durability to provide you with the best quality of alkaline water along with an extended of the Ionizer. These plates are Japanese solid titanium plates and are nano plated with platinum. These plates are independently lab tested for 99.989% pure titanium. The exclusive design and the cutting-edge technology of these plates ensure the best negative Oxidation Reduction Potential (-ORP) of these ionizers.

The Violet Ioniser consumes minimum power in evaluation to the alternative ionizers available inside the market without affecting its quality or performance on any scale, thus provides the user with the minimum operating cost. It is a unique technology of Chanson to have the lowest power

consumption and maximum plate life. Otherwise, both of them are contrary as if you reduce the power of the Ionizer, it starts deteriorating the ionizer plates, because it generally takes place with all different branded ionizers that are available in the market. Any wattage above 180 watts dramatically reduces the ionizer plate's life due to overheat Irrespective of its quality, technology and coating methods. Thanks to over 40 years of research, development, and intensive hard work of Chanson's researchers, designers, and engineers who pop out with the PL-B502-Violet Ionizer to consume only 150 watts of power on high alkaline and acidic levels, while still outperforming near all branded water ionizers available inside the market as on date.

The subsequent high-quality characteristic of the Violet Ionizer is to produce a wide range of alkaline ionized water at both the extreme ranges. Violet delivers both the highest and the lowest pH levels of water, depending upon the requirement. Whether you require water of pH 3.0 or 10.5, it delivers both. And, the best is there is no alteration in the output because of flow rate of the incoming water. Whether the incoming water is at a lower or higher flow, the output of chanson alkaline water ionizers continually remains the same. Otherwise, in other brand ionizers, the pH and ORP is always fluctuating.

The Chanson Violet water ionizer is fitted with a chemical-free four stage filter. One-micron silver-impregnated coconut shell carbon block filter is provided in the Chanson's ionizers, which are not only chemical-free but also addressing many basic chemical contaminants like chlorine and chloramines and their numerous side effects. Our water filters are chemical-free and assure all dangerous and other ingredients to stay away from the ionized water delivered, protecting your family from every threat of contaminated water, whereas the other branded ionizers are not contaminant-free to provide you such versatile protection against germs, contaminants, and other pathogens. Our consultant, that's why recommend a drinking water pre-filter for best results. For a typical water ionizer, the filter has to be replaced every 12 months with a pre-filtration system.
